Experience

Forward Deployed AI Engineer May 2026 – Present
Gambooza *Madrid, Spain*

- Own projects end to end in a two-person engineering team, from client meetings to production.
- Shipped a multi-tenant WhatsApp AI agent (OpenClaw, Pydantic AI, one Docker container per client) that answers owners' questions on sales and discrepancies, with tenant-level data access controls.
- Designed and trained per-venue YOLO tap-detection and tap-opening models with adaptive ROIs, reaching 0.998 recall on held-out data; the methodology was adopted across 10+ venues.
- Built a multi-tenant POS ingestion pipeline on Google Cloud Functions and Firestore, integrating 6 POS systems to process ~72k–180k sale lines per week across 18 venues.
- Replaced spreadsheet and Looker Studio reporting with a self-updating client dashboard, cutting weekly report preparation from up to a full workday to a one-click send.
- Redesigned the nightly video pipeline (HD storage, GPU processing), cutting processing time per venue by ~35%.

Research Software Engineer Dec. 2024 – Apr. 2026
Universidad Autónoma de Madrid – MISO Research Group *Madrid, Spain*

- Built TRACER (MSc thesis, 10/10), a LangGraph agent that reverse-engineers any chatbot as a black box to generate test profiles; 94% average precision on real-world chatbots, published at ICTSS 2025 and in SN Computer Science, released on PyPI.
- Single-handedly designed, built and deployed Chatbot Dōjō, a full-stack testing platform (React, Django REST, PostgreSQL, Celery, Docker, Nginx) that unifies TRACER and the lab's user simulator; presented as a tool demo at ICSE 2026.

Projects

CertiCamper | *Full-Stack Web Platform* [Website] Present

- Building a customer portal that replaces email and document workflows for a vehicle engineering consultancy's camper homologation, with FastAPI, React, TypeScript, PostgreSQL, Docker and RBAC.

Obsidian Smart Export | *TypeScript* [Code] [Website] Present

- Built and maintain an open-source Obsidian Community Plugin with nearly 3k downloads that exports linked notes through BFS over wikilinks, with GitHub Actions release automation.

Education

Universidad Autónoma de Madrid Madrid, Spain
MSc in Data Science *Sep. 2024 – Jun. 2025*

- GPA: 8.41/10; thesis (10/10), published: *Automated Exploration of Conversational Agents for the Synthesis of Testing Profiles*; Highest Honors in Recommendation Systems.

Universidad Autónoma de Madrid Madrid, Spain
BSc in Computer Science *Sep. 2020 – Jun. 2024*

- GPA: 8.31/10; Highest Honors in Data Structures and Mobile App Development; Excellence Scholarships in 2nd and 4th year; international study in Finland and China.

Technical Skills

Programming Languages: Python, JavaScript/TypeScript, Java, C/C++, Kotlin, SQL, Bash
Backend & Cloud: Google Cloud (Functions, Run), Firestore, Django, FastAPI, REST APIs, PostgreSQL, Celery, Docker
LLM Agents: OpenClaw, Pydantic AI, LangGraph, LangChain, OpenAI API
Frontend: React, Vue, Astro, Tailwind CSS
Computer Vision & Data: YOLO (training, evaluation), object tracking, MLflow, CVAT, Scikit-learn, PyTorch, Pandas
Tools: Git, GitHub Actions, Linux, Vim, VS Code, Jupyter, LaTeX
